

OpenTrac Director™

For those with a need to track their entire supply chain from producer to customer, we created OpenTrac Director. As material ships from producers, toll processors, service centers and warehouses our system assures accurate tracking within a just-in-time (JIT) environment. The web based OpenTrac Director system is designed to provide business-to-business (B2B) transaction communications to and from suppliers and customers.

In addition to material tracking, OpenTrac Director is also capable of:

- Managing customer and vendor setups
- Maintaining part profiles
- Inventory management
- Planning for inventory needs through forecasting
- Organizing test results
- Keeping track of quality control statuses
- Managing purchase and sales orders
- Customer invoicing
- Interfacing with external accounting packages
- Handling customer inquiry
- EDI and e-commerce messaging
- Data validation
- Report writing
